## Program Concept and Objectives:

Agriculture Insurance plays a critical role in safeguarding the livelihoods of farmers and supporting the agricultural economy. The fragile segment of the farming community depends on efficient claim settlements with the least turnaround time. This becomes possible only when the Claims settling mechanism in insurance companies including Insurance Surveyors, who are pivotal stakeholders in the claims process, have a deep understanding of the nuances of Agriculture Insurance, including crop loss assessment, claim procedures, and regulatory expectations.

The program is designed to empower participants with the skills and knowledge necessary to effectively handle Agriculture Insurance claims and insights into the best practices, and practical approaches for accurate and fair claim settlements, ensuring transparency and efficiency in the process.

In order to reach out to the participants in far-flung areas of the country, COI is conducting this one-day program (3 hours) on the virtual mode. COI's '**Virtual Training (CVT) Rooms**' provide an innovative and cost-effective platform to deliver this one-day program, enabling participants to learn and upskill from their own locations.

## Key Takeaways from the program:

The program is designed to enable participants to:

- Understand the **concepts and framework** of Agriculture Insurance.
- Develop insights into **Crop Loss Assessment methodologies** and related tools.
- Learn about **best practices** in survey and claim settlement for Agriculture Insurance.
- Enhance skills to ensure **accuracy, fairness, and efficiency** in claim processing

## Participant Profile:

Professionals working in Insurance companies, agriculture departments, brokers, service providers and students of agriculture interested in building expertise in crop loss assessment and agriculture claims handling may join. Professionals working as Agriculture Surveyors and those desirous of joining the survey profession would get significant insights from the program.
